

Patient **Safety** Can't Wait. **Transition to ENFit® Now!**

During this time of high acuity, patient census and clinician fatigue, it's important to have a safeguard against accidental enteral misconnections.

The ENFit® system reduces the risk of enteral misconnections.

ENFit® is a global enteral-specific design that provides a secure, locking connection. ENFit® is designed to mitigate the risk of misconnection with non-enteral devices.

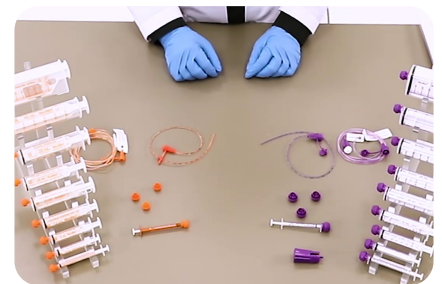

Avanos can support your ENFit® transition **remotely** with our exclusive **Virtual Go Live Program**. Our ENFit® experts will virtually walk you through each step of your conversion to ensure a smooth ENFit® transition.
